История работы

Software Engineer
2016 - 2017

BuddaSoft

- Proven exceptional analytical and quantitative skills
- Proven ability to handle complex issues
- Designed and maintained Postgres/MySQl databases using Python/ORM
- Co-created and maintained encrypted protocol and logic of the complex game
- Refactored code of huge Flask/Redis architecture
- Handled projects with least supervision
-

Founder, Fullstack Engineer
2015 - 2016

Closer

- Developed MVP of social startup based on integration with Facebook
- Developed both Frontend(HTML5/CSS, JS) and Backend (Django/Postgres/REST)
- Deployed application to VPS using NGINX, Gunicorn and built defence using UFW, fail2ban, SSH etc.
- Future development depended on raising VC which was unsuccessful as far as application didn't show enough traction, and at the same time I was invited to join BuddaSoft company, therefore development was set on pause

Freelance, Independent projects
2015 - 2016

- I gained first experience by taking small contracts that mostly required writing simple backend code in fields of e-commerce , blogs and etc.
- Had some experience with C, Objective-C, PHP, iOS game development before switching to Python

Education

Bachelor in Linguistics
2014 - 2018

Taras Shevchenko National University of Kyiv

English is my academic major
